

"Assistant Professor Pairaya CHOEISAI from Khon Kaen University, Thailand" came to Asahikawa

On July 17, 2018, Dr. CHOEISAI from Khon Kaen University visited Asahikawa. The Faculty of Engineering at the university has an agreement with our college to cooperate in research, education, and international exchanges. She gave a lecture on "Study on water treatment technology discarded from sugar cane molasses bio ethanol distillation place in Thailand" and "Internship program with Khon Kaen University" to the 1st grade students of Advanced Course.

Dr. CHOEISAI graduated from "Department of Industrial Chemistry" (the present "Department of Materials Chemistry") of our college in 1997, and after obtaining her Ph.D at Nagaoka University of Technology, she joined the faculty at Khon Kaen University. This lecture was planned and realized because of her participation in a conference to be held in Japan.

Internship students from Khon Kaen University are scheduled to visit our college in the latter half of this fiscal year. From now on, as well as Kasetsart University, it is expected that mutual internship between Khon Kaen University and our college will be realized.

Lecture to the 1st grade students of Advanced Course
