

We sent our first internship students to the Faculty of Engineering at Kasetsart University, Thailand

Based on the academic exchange agreement with the faculty of engineering at Kasetsart University (Bangkok, Thailand), 10 students, including fourth- and fifth-year regular course students and first-year advanced course students, were sent to take part in the internship program for a week from August 19 to 25.

While staying at the university-owned hotel, our students took mathematics and drawing classes, enjoyed cross-cultural experiences such as Thai boxing and Thai language, and visited a Japanese-affiliated local company and the Ayutthaya dynasty ruins. All communication was in English at places other than the Japanese company, thus putting the students in a tough position. They had a tough week, but they also certainly had precious moments at the same time.

Our students had the opportunity to learn Thai culture in more depth, thanks to a reunion with the students of Kasetsart University who had stayed in Asahikawa as an internship student from this May to July. Because KOSEN students from some colleges in Kyushu district happened to participate in the same internship program, they joined our students in making this overseas experience more fruitful.

It is expected that we will continue this academic and educational exchange in the future while maintaining long-term mutual relations.

"2018 Training Report Meeting by Kasetsart University Internship Students, Thailand"

On July 25 (Wed.), three internship students from Kasetsart University, Thailand had presentations in order to report their research outcomes that have been carried out in our college for two months . Our students who will participate in the internship at Kasetsart University on August attended this presentation along with some faculty members.

Based on our academic exchange agreement with Faculty of Engineering at Kasetsart University, Thailand, we started accepting internship students from this fiscal year. This time, three students who undertook the internship presented their results about academic research at our school.

The first presenter Ms. Nattida CHANPHOSRI reported on "Exploring oil producing algae from fresh-water pond in Asahikawa".

Subsequently, Ms. Vaetanee KOETMUANGSAMUT talked about her research result entitled "Anion detection by poly (phenylacetylene) with asparagine-derived amide receptors".

Finally, Mr. Kasidit KEEREEWARN gave his talk on "Growing Nb: SrTiO₃ thin films". All participants were listening to their presentations with great interest, and there were enthusiastic questions and answers in English among the students. It was a very valuable report meeting.
